# INNOVATIVE AMMUNITION

2016

# SUPER TARGET

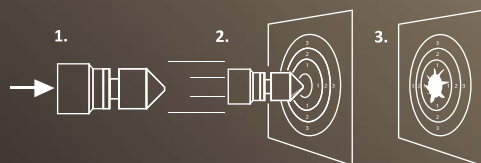

- HIGHEST PRECISION
- LOW RECOIL
- ADJUSTED VELOCITY
- IDEALLY CENTERED PROJECTILE

**Super Target** - unique steel slug load with lead-free projectile, adjusted for competition shooting in 50 m distance and moving target competitions in 35 m distance. Highest precision and excellent consistency are the essential characteristics of **Super Target** sport slug. **Super Target** has approved its superiority in competitions – shooters using Super Target have won 3 National championships and 2 National cups (National records broken 4 times) in Latvia during 2012 as well as matches in neighbour Baltic countries.

**ATTENTION: Do not use on steel targets!**

Target of Gunars Babris, National record scored in Latvian Championship (Shotgun - 50 m, standing target).

1. Perfect balance of projectile provides stability during the flight.
2. Ideally centered projectile ensures consistent accuracy.
3. Suitable for paper targets only.

Product	Gauge	Weight, g	Velocity, m/s	Energy, J	Best for
Super Target	12 / 70	25.0	330	1360	

# KAVIAR SLUG

- FRANGIBLE SLUG DESIGN
- REDUCED RECOIL
- SAFE USE ON STEEL TARGETS
- COMPLIES WITH THE IPSC REQUIREMENTS

**Kaviar Slug** is designed for home defense and target shooting.

Full-bore hollow-pointed slug, consisting of large amount of pellets and polyethylene, expands and fragments only after hitting the target and transfers the energy without over-penetration. Multiple wound channels made in a large area in the target make **Kaviar Slug** an excellent stopper in a close range.

1. Good balancing ensures stability during the flight.
2. No fragmentation during the flight.
3. Slug completely disintegrates upon impact.

Product	Gauge	Weight, g	Velocity, m/s	Energy, J	Best for
Kaviar Slug	12 / 70	29.5	330	1605	

# MONOLIT 28

- HIGH PRECISION
- REDUCED RICOCHET POSSIBILITY
- LIGHT RECOIL
- NO FRAGMENTATION

Solid steel main body with sharp edges overcomes obstacles without deformation and ensures deep penetration in the target, most important for big and dangerous game hunting.

1. There are obstacles in the way of the slug.
2. During penetration of obstacles slug is deflected from the balanced position.
3. Stabilizing surfaces turn the slug back in the initial direction.

Product	Gauge	Weight, g	Velocity, m/s	Energy, J	Best for
Monolit 28	12 / 70	28.4	445	2810	
Monolit 28	12 / 76	28.4	540	4140	
Monolit 25	16 / 70	25.0	425	2260	
Monolit 21	20 / 70	19.5	470	2150	

# MONOLIT 32

- FOR OVERGROWN HUNTING AREAS
- REDUCED RICOCHET POSSIBILITY
- DEEP PENETRATION
- SUITABLE FOR BIG AND DANGEROUS GAME

*Monolit* slug line is designed for hunting in overgrown areas where increased stability and resistance against obstacles is necessary. Self-stabilizing design of the slug ensures penetration of obstacles without deviation from initial trajectory.

- Designed for smoothbore, suitable also for rifled barrels
- Suitable for all chokes – polyethylene encasing ensures minimal friction and safe firing through any standard choke
- Effective energy transfer in the target with the flat forepart of slug
- Highest accuracy with a 1 mm choke or a cylinder

**Not recommended for use in back-bored (increased inner diameter) barrels**

Product	Gauge	Weight, g	Velocity, m/s	Energy, J	Best for
Monolit 32	12 / 70	32.0	430	2960	
Monolit 32	12 / 70	32.0	480	3690	

# DUPO 28

# HEXOLIT 32

- HIGH PRECISION
- CONTROLLED EXPANSION
- POWERFUL STOPPING IMPACT
- LIGHT RECOIL

Expanding slug line **Dupo** and **Hexolit** is designed for big game hunting. With increased diameter forepart, slug provides fast energy transfer creating powerful shockwave that stops the vital functions of game animal.

- Fast but controlled expansion – due to the patented inward-cone forepart design, slug expands immediately after the hit, increasing its forepart surface up to three times.
- Effective transfer of energy - controlled deformation ensures effective energy transfer, providing hydrodynamic impact on vital organs. It creates a shock that ensures complete loss of vital energy.

1. Fast expansion at the first moment of impact
2. Expands to the maximal diameter
3. Forms steady shape and creates a powerful shockwave
4. No over-penetration – 100% effectiveness – all energy transferred to the body

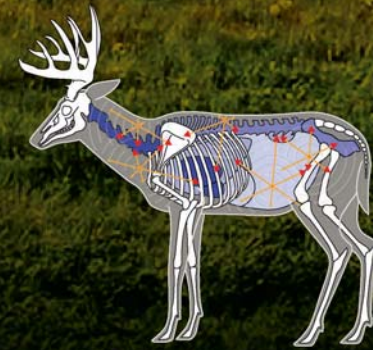

Product	Gauge	Weight, g	Velocity, m/s	Energy, J	Forepart surface increase	Forepart surface after hit, mm2	Best for
Dupo 28	12 / 70	28.0	445	2770	265%	705	  
Dupo 28	12 / 76	28.0	505	3570	265%	705	  
Dupo 23	16 / 70	23.0	440	2225	235%	610	  
Dupo 20	20 / 70	19.5	450	1975	300%	610	  
Dupo 16	28 / 70	16.0	450	1620	265%	415	  
Dupo 7	410 / 65	7.1	470	785	625%	510	

- POWERFUL STOPPING IMPACT
- WORLDS LARGEST EXPANSION EFFECT
- INCREASED IMPACT AREA BY FRAGMENTATION
- LARGE ENTRANCE HOLES

Slug expands immediately after hitting the body, providing large entrance holes and massive blood-tracks. **Hexolit 32** slug fragments on impact and provides unique combined stopping impact with main body and 6 splinters.

7 separate wound channels – slug fragment safter hitting the target, creating an impact in a large area with 6 regular splinters and deep penetration with main body of slug.

1. Fast expansion at the first moment of impact.
2. Expands to the maximal diameter, forms steady shape and creates a powerful shockwave.
3. Creates 7 wound channels – combined impact with main body and 6 regular splinters.
4. No over-penetration – 100% effectiveness – all energy transferred to the body.

Product	Gauge	Weight, g	Velocity, m/s	Energy, J	Forepart surface increase	Forepart surface after hit, mm2	Best for
Hexolit 32	12 / 70	32.0	425	2890	385%	1015	   
Hexolit 32	12 / 76	32.0	480	3690	385%	1015	   

# EXPERTS IN SHOTGUN AMMUNITION

## COMPANY

D Dupleks is experienced designer and manufacturer of ammunition, offering innovative and high quality shotgun ammunition for hunting, military and law enforcement needs. Our ammunition designs are based on unique manufacturing technologies and material - steel.

## EXPERIENCE

History begins in 1983 when first prototype of steel slug encased in polyethylene is made. After a period of intensive research and testing, company was established and production launched in 2001 with initial specialization in manufacturing of shotgun ammunition for hunting. Foreseeing the increasing need for tactical shotgun ammunition and seeing the unique technical capabilities of our slug designs, we developed and launched special purpose ammunition for defence sector.

## QUALITY

D Dupleks is an ISO 9001: 2008 certified company. We are an experienced team of professionals in ammunition; we create new designs and technology concepts and develop them from an idea up to a patented and implemented result.

## PATENTS AND CERTIFICATION

Our products are patented, CIP and FOCT certified for sales in Europe and Russian market. The military / LE product range has received NSN numbers for armament codification in NATO countries.

## NETWORK

D Dupleks ammunition is approved by customers and distributed through a growing sales network in more than 30 countries around the world: our clients can be found in Europe, Asia, USA and CIS.
